

MutinyX

Product Requirements Document

Influencer Marketing Execution Platform

Version 1.0 | February 2026 | Confidential

Products: MutinyX (Brand Platform) + MutinyTalent (Creator App)

1. Executive Summary

MutinyX is a dual-sided influencer marketing execution platform designed to connect brands with creators at scale. The platform consists of two deeply integrated products: MutinyX, a web-based platform for brands to discover, manage, and execute influencer campaigns, and MutinyTalent, a mobile app for creators to browse opportunities, submit work, and track earnings.

The platform addresses the core pain points of influencer marketing: fragmented discovery, opaque pricing, slow execution, and lack of real-time performance visibility — replacing them with a unified, AI-assisted workflow that spans the entire campaign lifecycle from strategy to optimization.

2. Product Overview

2.1 Product Vision

To be the end-to-end operating system for influencer marketing — where brands launch campaigns in minutes, creators get paid fairly, and every dollar is tracked in real time.

2.2 Products at a Glance

Product	Platform	Primary User	Core Purpose
MutinyX	Web (Mobile Responsive)	Brands & Marketing Teams	Campaign creation, creator discovery, analytics & optimization
MutinyTalent	Mobile App (iOS & Android)	Creators & Influencers	Apply to campaigns, submit content, track performance & earnings

2.3 Target Users

- Brands: DTC companies, agencies, enterprise marketing teams running influencer campaigns
- Creators: Instagram, YouTube, TikTok, and multi-platform influencers of all tiers (nano to mega)

3. Core Platform Architecture

3.1 Brand Platform — MutinyX

MutinyX is the command center for brands. It is accessible via web browser and is fully mobile responsive, enabling campaign managers to act from any device.

3.1.1 Dashboard

The central landing page after login. Provides an at-a-glance snapshot of the brand's entire influencer marketing activity.

Dashboard Components
Total Campaigns Counter — cumulative count of all campaigns created
Active Campaigns — live count with status indicators (running, paused, ended)
Task Bar — primary navigation across all platform modules
Quick Actions — one-click shortcuts to create campaign, explore creators, view analytics

3.1.2 Task Bar Navigation

The persistent top-level navigation across the platform. Contains five core modules:

Module	Description
Campaigns	Full campaign management: create, edit, pause, monitor, and close campaigns
Creators	Discovery engine: explore creator profiles with deep data, connect directly for campaigns
Tracking	Content review hub: review influencer submissions — scripts, drafts, final content
Content	Content asset library: all approved and submitted content organized by campaign
Analytics	Real-time campaign analytics, top performer rankings, and paid amplification controls

4. Feature Specifications

4.1 Creator Discovery (Creators Module)

Brands can search and filter the full creator marketplace to identify ideal influencers before initiating a Direct Campaign or reviewing applicants for a Bulk Campaign.

4.1.1 Creator Profile Data

- Platform handles: Instagram, YouTube, TikTok, Twitter/X, Pinterest
- Audience demographics: age, gender, geography breakdown
- Engagement rate, average views, follower count, follower growth trend
- Niche tags and content categories
- Past brand collaborations and campaign performance history
- Estimated cost per post / story / reel based on market data and past rates
- Creator authenticity score (bot detection, audience quality index)

4.1.2 Direct Connect

From a creator profile, brands can click Connect to initiate a direct negotiation. This opens a private messaging thread within the platform where the brand and creator negotiate deliverables, timelines, and pricing before formally launching a Direct Campaign.

4.2 Campaign Creation

Brands have two methods to create a campaign:

4.2.1 AI Strategy Mode

An AI-guided conversational workflow that interviews the brand to generate a full campaign strategy. The AI takes into account:

- Brand personality, tone, visual guidelines, and values
- Product or service being promoted and target audience
- Historical campaign data: past performance, best-performing creator tiers, content formats
- Budget range and campaign duration goals
- Platform-specific trends and recommendations

Output: A ready-to-launch campaign brief including recommended creator criteria, suggested pricing ranges, content formats, campaign objectives, and KPI targets. The brand can edit and approve before publishing.

4.2.2 Step-by-Step Manual Mode

A structured form-based wizard for brands that prefer full manual control. Fields include campaign name, type (Direct or Bulk), brief, deliverables, budget, timeline, hashtags, posting guidelines, and approval workflow settings.

5. Campaign Types & Flows

5.1 Direct Campaign

A one-to-one campaign initiated by a brand targeting a specific creator they have already identified and chosen to work with.

Direct Campaign Flow
Step 1 — Brand explores Creators module and identifies ideal creator(s)
Step 2 — Brand clicks Connect on a creator profile
Step 3 — In-platform negotiation: deliverables, timelines, and pricing agreed upon
Step 4 — Brand creates a Direct Campaign and assigns the negotiated creator(s)
Step 5 — Campaign is launched; creator receives assignment in MutinyTalent app
Step 6 — Creator submits work (script → draft → final content) via MutinyTalent
Step 7 — Brand reviews and approves submissions in the Tracking module
Step 8 — Content goes live; performance tracked in Analytics module

5.2 Bulk Campaign

An open-call campaign where a brand publishes a campaign brief and multiple creators can apply. This is ideal for brands wanting to reach many creators simultaneously or run large-scale campaigns.

Bulk Campaign Flow
Step 1 — Brand creates a Bulk Campaign with a brief, requirements, and total budget
Step 2 — Campaign is published to the MutinyTalent creator marketplace
Step 3 — Creators browse open campaigns in MutinyTalent and submit applications with their proposed price
Step 4 — Brand accesses the Applicants Dashboard: a sortable table of all applying creators
Step 5 — Brand reviews each creator's profile, metrics, and proposed price
Step 6 — Brand selects creators; Budget Consumption Bar updates in real time
Step 7 — Estimated Reach Counter updates dynamically based on selected creator combination
Step 8 — Brand finalizes selections and launches; selected creators are notified
Step 9 — Work submission and approval follows same flow as Direct Campaign

5.3 Bulk Campaign — Applicants Dashboard

The brand-facing view when reviewing applicants for a Bulk Campaign. This is a key differentiating feature of the platform.

Component	Description
Creator Cards/Rows	Each applicant shown with profile photo, handle, platform, followers, engagement rate, and proposed price
Sort & Filter	Filter by platform, follower tier, engagement rate, price range, niche, and location
Budget Consumption Bar	Visual progress bar showing total budget vs. amount committed to selected creators; updates on every selection change
Estimated Reach Counter	Dynamic total estimated reach calculation based on the current combination of selected creators
Combo Optimization Hint	AI-powered suggestion showing which combination of creators maximizes reach within budget
Selection Controls	Checkbox-style selection; brands can add/remove creators and see metrics update instantly

6. Tracking Module

The Tracking module is the content review and approval workflow for all active campaigns. Brands can review every stage of content creation before it goes live.

Stage	Creator Action	Brand Action
Script / Concept	Creator submits written script or content concept	Brand reviews, approves, or requests revision
Draft Content	Creator uploads draft video, image, or story	Brand reviews, approves, or sends feedback
Final Content	Creator submits final ready-to-post content	Brand gives final approval; content cleared for posting
Posted	Creator posts on their platform	Brand verifies posting; analytics begin tracking

All revision requests are managed within the platform messaging thread to maintain a complete audit trail of feedback and approvals.

7. Analytics Module

7.1 Overview

The Analytics module provides brands with a real-time, unified view of campaign performance across all active and past campaigns.

7.2 Key Metrics Tracked

- Impressions, reach, and estimated views per piece of content
- Engagement: likes, comments, shares, saves, and click-throughs
- Engagement rate per creator and per content piece
- Story swipe-ups and link clicks (where applicable)
- Audience sentiment indicators from comment analysis
- Cost per engagement (CPE) and cost per reach (CPR)
- Campaign ROI estimate based on brand-provided conversion data

7.3 Top Performer Rankings

An auto-generated leaderboard of top-performing creators within each campaign and across all campaigns. Ranked by engagement rate, reach, and CPE. Used by brands to identify creators for repeat collaborations or paid amplification.

7.4 Content Boosting via Paid Ads

From the Top Performers view, brands can select high-performing organic content and boost it through paid advertising directly within the platform. This creates a seamless path from organic influencer content to paid amplification without leaving MutinyX.

- Select content to boost from top performer list
- Set budget, duration, and target audience for the paid campaign
- Platform integrates with Meta Ads and TikTok Ads APIs for distribution
- Boosted content performance tracked separately within the same Analytics dashboard

8. MutinyTalent — Creator App

8.1 Overview

MutinyTalent is the creator-facing mobile application (iOS and Android) that enables influencers to discover campaigns, submit applications, deliver content, communicate with brands, and track their earnings.

8.2 Core Creator Features

Feature	Description
Campaign Marketplace	Browse all open Bulk Campaigns with filters for niche, budget range, platform, and brand
Campaign Application	Submit application with proposed price, portfolio samples, and a brief pitch
Direct Campaign Inbox	Receive and respond to direct outreach from brands; negotiate terms in-app
Work Submission Portal	Upload scripts, drafts, and final content for each campaign deliverable
Feedback & Revisions	Receive brand feedback in-app; resubmit revised content
Earnings Tracker	View pending, approved, and paid earnings per campaign
Performance Insights	View analytics on posted content: reach, engagement, and brand rating
Profile Manager	Keep creator profile, media kit, and platform connections up to date

8.3 Invoice Generator

The Invoice Generator is a built-in financial tool within MutinyTalent that allows creators to generate, send, and manage professional invoices for their campaign work — directly from the app, without needing any third-party invoicing software.

8.3.1 Invoice Creation

Creators can generate an invoice for any completed or approved campaign with a single tap. The system pre-populates all available data from the campaign agreement, reducing manual entry to near zero.

Auto-Populated Invoice Fields
Creator name, handle, and contact details (pulled from profile)
Brand name and billing contact (pulled from campaign data)
Campaign name and unique campaign ID
Deliverables completed: content type, quantity, and platform
Agreed rate per deliverable and total amount due
Campaign completion / content approval date
Unique invoice number (auto-generated, sequential)
Payment due date (configurable: Net 7, Net 15, Net 30)

8.3.2 Editable Fields

While most fields are auto-populated, creators retain full control to customize before sending:

- Add additional line items (e.g., usage rights fees, exclusivity fees, rush fees)
- Apply discounts or adjust negotiated rates if terms changed post-campaign
- Add custom notes or payment instructions to the brand
- Select preferred currency (multi-currency support)
- Toggle inclusion of bank transfer details or platform wallet details

8.3.3 Invoice States & Lifecycle

State	Description	Creator Action Available
Draft	Invoice created but not yet sent to brand	Edit, Preview, Send
Sent	Invoice dispatched to brand via platform notification and email	Remind, Download PDF
Viewed	Brand has opened the invoice	Send Reminder

State	Description	Creator Action Available
Approved	Brand has confirmed the invoice is correct	Await Payment
Paid	Payment marked as received (manual or platform-triggered)	Download Receipt
Disputed	Brand has raised an issue with the invoice	Respond, Revise & Resend
Overdue	Payment due date has passed with no payment recorded	Send Overdue Reminder, Escalate

8.3.4 Invoice PDF Export

Every invoice can be exported as a professional, branded PDF. The PDF output includes the MutinyTalent platform watermark (removable on Pro tier), the creator's profile photo and social handle, full itemized line items, payment terms, and a QR code linking to the digital invoice for easy brand-side verification.

8.3.5 Invoice Dashboard

Creators have a dedicated Invoices section within MutinyTalent showing:

- Summary cards: Total Earned (all time), Pending Amount, Overdue Amount
- Invoice list with filters by status, campaign, brand, and date range
- Monthly earnings chart for quick income visualization
- One-tap access to resend, download, or dispute any invoice

8.3.6 Payment Reminders

The platform handles follow-up automatically based on creator preferences:

- Automatic reminder sent to brand 2 days before payment due date
- Overdue notification sent to brand on due date if unpaid
- Creator receives in-app and push notification when invoice is viewed, approved, or paid
- Escalation option available after 7 days overdue — flags the invoice to MutinyX support for dispute mediation

8.3.7 Tax & Compliance

- Creators can add their tax ID or VAT number to their profile, which auto-populates on all invoices
- Platform generates an annual earnings summary report for tax filing purposes
- GST / VAT toggle available for applicable regions
- All invoices and earnings records stored securely for a minimum of 7 years

9. Brand Onboarding & Profile Setup

9.1 Overview

Every new brand account goes through a structured onboarding flow before gaining full access to MutinyX. This ensures campaign quality, brand authenticity, and a better creator experience on the platform.

9.2 Onboarding Steps

Step	Action	Details
1	Account Creation	Sign up with business email; verify email address via OTP
2	Business Verification	Enter company name, website, industry, and company size; platform does a basic domain verification check
3	Brand Profile Setup	Upload brand logo, set brand name, write a short brand bio, add social handles
4	Brand Guidelines	Upload brand guidelines doc (optional but recommended); set tone of voice, visual do's and don'ts — used by AI Strategy Mode
5	Platform Preferences	Select primary social platforms for campaigns (Instagram, TikTok, YouTube, etc.)
6	Billing Setup	Add payment method; select subscription plan (Free, Pro, or Enterprise)
7	Walkthrough	Interactive product tour covering Dashboard, Campaigns, Creators, and Analytics modules

9.3 Brand Profile Page

Once onboarded, every brand has a profile page visible to creators on MutinyTalent when they browse campaigns. This builds trust and helps creators make informed decisions about which brands to work with.

- Brand logo, name, website, and industry
- Short brand bio and social handles
- Total campaigns run on the platform
- Average creator rating given (transparency metric)
- Average payment turnaround time (auto-calculated from payment history)
- Verified badge once business verification is complete

10. Payment Flow

10.1 Payment Model

MutinyX processes payments to creators after content has been approved by the brand. No money moves until the brand has reviewed and signed off on the final deliverable — protecting both sides of the transaction.

10.2 Payment Flow

End-to-End Payment Flow
Step 1 — Brand funds campaign wallet before or at campaign launch (pre-authorization)
Step 2 — Funds are ring-fenced per creator agreement (not yet transferred)
Step 3 — Creator submits final approved content
Step 4 — Brand approves content in the Tracking module
Step 5 — Platform automatically triggers payment release to creator's MutinyTalent wallet
Step 6 — Creator can withdraw to bank account or keep in platform wallet
Step 7 — Invoice is auto-marked as Paid in the creator's Invoice Dashboard

10.3 Payment Rules & Protections

- Brands must pre-fund campaigns before creators can be selected or campaign can go live
- If a brand fails to approve or reject content within 7 days of submission, payment is auto-released to the creator
- Partial payments supported for multi-deliverable campaigns (paid per approved deliverable)
- Platform charges a transaction fee deducted at the time of payment release (fee varies by plan tier)
- All transactions are logged with timestamps for dispute resolution

10.4 Supported Payment Methods

- Brand side: Credit/debit card, bank transfer, wire transfer (Enterprise)
- Creator side: Bank transfer, UPI (India), PayPal, platform wallet
- Multi-currency support with automatic FX conversion at time of payment

11. Notifications

11.1 Supported Channels

MutinyX and MutinyTalent support four notification channels: in-app notifications, mobile push notifications, email, and SMS/WhatsApp. Users can manage their notification preferences in account settings.

11.2 Notification Events

Event	Who Gets Notified	Channels
Campaign goes live	Matching creators (Bulk)	Push, In-app
Creator applies to Bulk Campaign	Brand	In-app, Email
Brand connects for Direct Campaign	Creator	Push, In-app, WhatsApp
Creator selected for campaign	Creator	Push, In-app, Email, SMS
Content submitted by creator	Brand	In-app, Email
Brand approves content	Creator	Push, In-app, WhatsApp
Brand requests revision	Creator	Push, In-app, Email, WhatsApp
Payment released	Creator	Push, In-app, Email, SMS, WhatsApp
Invoice viewed by brand	Creator	Push, In-app
Invoice overdue	Brand + Creator	In-app, Email, SMS
Campaign ending soon (48hr)	Brand + Creator	In-app, Email
New message in negotiation thread	Brand + Creator	Push, In-app, WhatsApp

12. Rating & Review System

12.1 Overview

After a campaign is marked complete, brands can rate the creator they worked with. Ratings are used to build creator reputation scores visible on their profiles, helping future brands make better-informed decisions.

12.2 Brand Rates Creator

- Rating prompt appears for the brand 24 hours after final content approval
- Star rating: 1–5 stars across three dimensions — Content Quality, Professionalism, and Adherence to Brief
- Optional written review (max 300 characters) shown publicly on creator profile
- Brand can flag a creator for policy violations separately from the rating flow

12.3 Creator Reputation Score

Each creator has a Reputation Score on their MutinyTalent and discovery profile, calculated from:

- Weighted average of all brand star ratings received
- Campaign completion rate (completed campaigns / accepted campaigns)
- Average revision rounds (lower is better)
- Payment dispute history

The Reputation Score is displayed as a badge on creator profiles and in the Bulk Campaign applicants dashboard, helping brands quickly assess creator reliability.

13. Subscription & Pricing Model

13.1 Brand Plans

Feature	Free	Pro	Enterprise
Active Campaigns	2	20	Unlimited
Creator Discovery	Limited (top 50 results)	Full access	Full access + priority filters
AI Strategy Mode	Not included	Included	Included + custom brand training
Bulk Campaigns	1 open at a time	10 open at a time	Unlimited
Direct Campaigns	Included	Included	Included
Analytics	Basic (7-day)	Full real-time	Full real-time + export
Content Boosting	Not included	Included	Included + managed boost service
Team Members	1 (owner only)	Up to 5	Unlimited + roles & permissions

Feature	Free	Pro	Enterprise
Transaction Fee	8%	5%	Custom / negotiated
Support	Community + docs	Email support	Dedicated account manager
Invoice Watermark (creator)	MutinyTalent branded	MutinyTalent branded	Removable on request

13.2 Creator Plans

MutinyTalent is free for all creators. Platform transaction fees are charged on the brand side only. Creators keep 100% of their agreed campaign rate minus applicable taxes in their jurisdiction.

14. Creator Verification & Onboarding (MutinyTalent)

14.1 Overview

Creators go through a two-phase onboarding process: social account connection via OAuth, followed by a profile review. This ensures all creators on the platform are genuine, active, and meet minimum quality thresholds.

14.2 Onboarding Flow

Step	Action	Details
1	Download & Sign Up	Download MutinyTalent app; sign up with email or Google/Apple SSO
2	Connect Social Accounts	OAuth connection to at least one supported platform (Instagram, TikTok, YouTube)
3	Auto Data Pull	Platform pulls follower count, engagement rate, recent posts, and audience demographics via API
4	Profile Setup	Creator adds bio, content niche tags, location, preferred language, and profile photo
5	Portfolio Upload	Upload up to 6 best content samples (links or media files)
6	Profile Review	Platform runs automated checks; flags accounts below minimum thresholds for human review
7	Verification Badge	Accounts passing review receive a Verified badge; notified within 48 hours

14.3 Minimum Eligibility Thresholds

To maintain campaign quality, creator accounts must meet the following minimums to be approved on the platform:

- Minimum 1,000 followers on at least one connected platform
- Minimum 2% engagement rate (calculated from last 12 posts)
- Account must be active: at least 1 post in the last 30 days
- No prior policy violations or bans on connected social platforms (auto-checked)

14.4 Re-Verification

Creators are automatically re-verified every 90 days to ensure their metrics and account status remain current. If a creator's account drops below eligibility thresholds, they are moved to a Restricted state and cannot apply to new campaigns until resolved.

15. In-Platform Negotiation (Direct Campaigns)

15.1 Overview

All negotiation between brands and creators for Direct Campaigns takes place exclusively within the MutinyX platform via the in-platform chat. This keeps every conversation, agreement, and revision on record — providing a clean audit trail and enabling dispute resolution if needed.

15.2 Negotiation Chat Features

- Persistent threaded chat between the brand and a specific creator, initiated from the creator profile via the Connect button
- Both parties can share deliverable details, timelines, pricing proposals, and counter-offers directly in the thread
- Structured Deal Summary card generated once both parties verbally agree — lists deliverables, price, posting date, and usage rights
- Brand clicks Confirm Deal to formally lock terms and convert the negotiation into an active Direct Campaign
- Chat thread is preserved and accessible throughout the campaign lifecycle for reference
- All messages timestamped and stored for dispute resolution purposes

16. Creator Campaign Rules

16.1 Simultaneous Campaigns

Creators on MutinyTalent can participate in an unlimited number of active campaigns simultaneously. There is no platform-imposed cap. Creators are responsible for managing their own bandwidth and delivery timelines across concurrent campaigns.

16.2 Missed Deadlines & Inactive Creator Policy

If a creator goes silent or misses a submission deadline, the following escalation flow is triggered automatically:

Day	Action	Triggered By
Deadline Day	Submission marked Overdue; creator receives push, in-app, and WhatsApp reminder	Automatic
Day 2	Second reminder sent to creator across all notification channels	Automatic
Day 4	Brand is notified creator has not submitted; brand given option to extend deadline or initiate cancellation	Automatic
Day 7	Brand can formally cancel the creator's participation in the campaign	Brand action
Post-Cancel	Refund or partial payment applied per cancellation policy; slot reopened for new creator (Bulk) or campaign flagged (Direct)	Automatic

Creators with repeated missed deadlines receive a strike on their profile. Three strikes within 90 days results in a temporary suspension from applying to new campaigns.

17. Supported Content Formats

17.1 Deliverable Types

MutinyX supports all major content formats as campaign deliverables. Brands can specify one or more required formats when creating a campaign. Creators submit the corresponding content type through the MutinyTalent work submission portal.

Format	Platforms	File Types Accepted	Max File Size
Short-form Video (Reels / TikTok)	Instagram, TikTok	MP4, MOV	500 MB
Long-form Video (YouTube)	YouTube	MP4, MOV, AVI	4 GB
Static Image / Carousel Post	Instagram, Facebook, Twitter/X	JPG, PNG, WEBP	50 MB per image
Stories (24hr Content)	Instagram, Facebook	MP4, JPG, PNG	100 MB
Blog / Written Content	Brand website, Medium, LinkedIn	Google Doc link, PDF, DOCX	10 MB
Podcast / Audio	Spotify, Apple Podcasts, YouTube	MP3, WAV, M4A	500 MB

17.2 Script / Concept Submission

Regardless of content format, all campaigns require a Script or Concept submission as the first deliverable stage before production begins. Scripts are submitted as plain text or uploaded document within MutinyTalent and reviewed by the brand in the Tracking module before the creator proceeds to filming or production.

18. Creator Lists & Favourites

18.1 Overview

Brands can save creators to private lists at any point during discovery, campaign review, or post-campaign. Lists are personal to each brand account and never visible to creators or other brands.

18.2 List Features

- Save any creator to a list directly from their profile, the discovery search results, or the Bulk Campaign applicants dashboard
- Create multiple named lists to organise creators by campaign type, niche, tier, or any custom label (e.g. Top Fashion Nano, YouTube Tech Reviewers, Past Performers)
- Add internal notes to any saved creator visible only to the brand team
- Launch a Direct Campaign directly from a saved list without needing to re-search

- List view shows live creator metrics — follower count, engagement rate, and Reputation Score always up to date
- Share lists across team members within the same brand account (Pro and Enterprise plans)

19. Analytics & Report Exports

19.1 Export Formats

Brands on Pro and Enterprise plans can export campaign analytics and performance reports in both PDF and CSV formats directly from the Analytics module.

19.2 Exportable Reports

Report Type	Format	Contents
Campaign Summary Report	PDF, CSV	Campaign overview, total reach, impressions, engagement, spend, CPE, top creators
Creator Performance Report	PDF, CSV	Per-creator breakdown: reach, engagement rate, content pieces, cost, Reputation Score
Content Performance Report	CSV	Per-content-piece metrics: views, likes, comments, shares, saves, click-throughs
Boosted Content Report	PDF, CSV	Paid amplification stats: ad spend, boosted reach, ROAS, audience breakdown
Campaign Comparison Report	PDF, CSV	Side-by-side comparison of up to 5 campaigns across key KPIs

19.3 Export Rules

- PDF exports are formatted as branded, print-ready reports with MutinyX styling suitable for client or stakeholder presentations
- CSV exports contain raw data for further analysis in Excel, Google Sheets, or BI tools
- Exports are generated asynchronously for large datasets; brand is notified via email and in-app when the file is ready to download
- Export history stored for 90 days; downloadable again without regenerating

20. Campaign Cancellation & Refund Policy

20.1 Brand-Initiated Cancellation

If a brand cancels a campaign after a creator has been selected and work has begun, the following policy applies to protect creators who have already invested time and effort.

Stage at Cancellation	Creator Payment	Brand Refund
Before creator accepts campaign	No payment	Full refund to brand wallet
Creator accepted, no content submitted yet	Kill fee: 25% of agreed rate	75% refunded to brand wallet
Script / concept submitted and approved	50% of agreed rate	50% refunded to brand wallet
Draft content submitted	75% of agreed rate	25% refunded to brand wallet
Final content submitted (pending approval)	100% of agreed rate	No refund

20.2 Cancellation Rules

- Brands can initiate cancellation from the campaign management page at any stage
- Cancellation reason is required and logged for platform improvement and dispute context
- Partial payments to creators are released automatically within 48 hours of cancellation confirmation
- Brands cannot cancel a campaign after final content has been submitted — they must either approve or raise a dispute
- Repeated cancellations by a brand (more than 3 in 60 days) are flagged for admin review and may result in account restrictions

20.3 Creator-Initiated Withdrawal

A creator may withdraw from a campaign before submitting any content. In this case the creator receives no payment and the brand's full budget for that creator slot is returned to the campaign wallet. The slot is then available to reassign (Bulk) or the brand is notified to find a replacement (Direct).

21. Admin Panel

21.1 Overview

The MutinyX Admin Panel is an internal tool accessible only to the MutinyX operations and support team. It provides full visibility and control over all platform activity including users, campaigns, disputes, payments, and platform health.

21.2 Admin Modules

Module	Capabilities
User Management	View, search, edit, suspend, or permanently ban any brand or creator account; view full account history and activity log
Campaign Oversight	View all campaigns across the platform; pause, flag, or force-close any campaign; review reported campaigns
Dispute Resolution	Access all active and historical disputes; review evidence (chat logs, submitted content, invoices); issue rulings (release payment, issue refund, split payment)
Payment Management	View all transactions; manually trigger or reverse payments; manage failed payment retries; view platform revenue and fee collection
Creator Verification Queue	Review flagged creator accounts that failed automated verification; approve or reject with notes
Platform Health Dashboard	Real-time metrics: active users, campaigns live, server uptime, error rates, API health for all integrations
Content Moderation	Review flagged content submissions; remove policy-violating content; issue creator warnings or strikes
Announcements	Publish in-app banners and notifications to all brands, all creators, or specific user segments

21.3 Admin Access Levels

- Super Admin: Full access to all modules including destructive actions (bans, payment reversals)
- Support Agent: Access to dispute resolution, user management (view and suspend only), and verification queue
- Finance Admin: Access to payment management and transaction logs only
- All admin actions are logged with the acting admin ID and timestamp for accountability

22. Digital Contracts & Agreements

22.1 Overview

When a campaign is confirmed the platform automatically generates a legally structured digital contract both parties must sign before the campaign becomes active and any work begins.

22.2 Auto-Generated Contract Contents

- Party details: brand legal name, creator name, handle, and platform
- Campaign name and unique campaign ID
- Deliverables: content format, quantity, platform, and posting requirements
- Posting window: agreed date range within which content must go live
- Agreed compensation and payment terms
- Content usage rights: where and how long the brand can repurpose the content
- Revision policy: maximum number of revision rounds permitted
- Cancellation and refund terms per platform policy
- Content ownership clause: creator retains ownership; brand receives limited usage license
- Platform jurisdiction clause: all disputes handled via MutinyX dispute resolution

22.3 Signing Flow

- Both brand and creator receive an in-app notification and email prompting them to review and sign
- Signing is done via in-app e-signature with timestamp
- Campaign only activates once both parties have signed
- Signed contract PDF is stored on both accounts and downloadable at any time
- If either party does not sign within 48 hours a reminder is sent; after 72 hours the campaign is auto-cancelled and budget returned

23. Content Boosting via Paid Ads

23.1 Overview

Brands can amplify top-performing organic influencer content through paid advertising directly from the MutinyX Analytics module. Ads are run through the brand's own connected Meta or TikTok ad account — MutinyX acts as the orchestration layer, not the ad account owner.

23.2 Ad Account Connection

- Brands connect their Meta Business Manager and/or TikTok Ads Manager accounts during onboarding or from account settings
- Connection is done via OAuth; MutinyX requests only the permissions required to create and manage campaigns on the brand's behalf
- Brands retain full ownership and billing control within their own ad accounts
- Multiple ad accounts can be connected such as separate Meta accounts per market

23.3 Boost Flow

Step	Action
1	Brand identifies top-performing content in the Analytics Top Performers view
2	Brand clicks Boost on a content piece
3	Brand selects connected ad account to run the boost from
4	Brand sets boost budget, duration, and target audience (age, gender, location, interests)
5	MutinyX submits the ad to Meta or TikTok via API using the creator's posted content as the ad creative
6	Ad goes live after platform review (typically within 24 hours)
7	Boosted content performance tracked separately in Analytics: ad spend, boosted reach, ROAS, audience breakdown

23.4 Creator Consent for Boosting

- Creators must opt in to allow their content to be boosted at the time of campaign agreement
- Creators who have not consented will not appear in the boost-eligible content list
- Usage rights for boosted content are governed by the auto-generated campaign contract

24. AI Strategy Mode — Data & Intelligence

24.1 Data Sources

The AI Strategy Mode builds campaign recommendations by drawing on five data sources, giving brands highly contextualised and actionable campaign strategies rather than generic suggestions.

Data Source	What It Contributes
Brand Guidelines & Tone of Voice Doc	Ensures recommended content formats, creator personas, and messaging angles align with the brand's visual identity and communication style
Brand's Past Campaign Results on MutinyX	Identifies what has and has not worked for this specific brand: top-performing creator tiers, formats, platforms, and campaign structures
Industry Benchmarks & Platform Trends	Provides context on what is currently performing well across the brand's industry category on each social platform
Competitor Campaign Data	Anonymised aggregated data on competitor campaign activity including creator tiers used, content formats, and estimated spend ranges
Creator Performance History Across All Brands	Platform-wide creator performance data (anonymised per brand) to recommend creators with a proven track record in similar campaigns

24.2 AI Strategy Output

After the AI completes its conversational intake with the brand, it produces a full Campaign Strategy Brief containing:

- Recommended campaign type (Direct or Bulk) with rationale
- Suggested creator tier mix with estimated reach and budget allocation
- Recommended content formats and platforms ranked by expected performance
- Suggested campaign duration and posting window
- KPI targets: estimated reach, engagement rate, and CPE benchmarks
- Key messaging angles and content dos and don'ts based on brand guidelines
- Warnings or suggestions based on past campaign underperformance patterns

24.3 Data Privacy Rules

- Competitor data used is fully anonymised — brands cannot identify which competitor's data they are seeing
- Creator performance data shared across brands is aggregated — no brand can access another brand's creator relationship data
- Brands can opt out of contributing their campaign data to the platform intelligence pool in Enterprise plan settings

25. Gifting & Product Seeding Campaigns

25.1 Overview

In addition to paid cash campaigns, MutinyX supports gifting campaigns where brands send physical or digital products to creators in exchange for content with no monetary compensation. This campaign type is ideal for product launches, awareness plays, and building long-term creator relationships.

25.2 Gifting Campaign Flow

Step	Brand Action	Creator Action
1	Create campaign; select Gifting as campaign type; describe product and estimated retail value	—
2	Publish campaign (Bulk) or connect directly with creator (Direct)	—
3	—	Creator reviews product details and opts in; submits delivery address via MutinyTalent (encrypted)
4	Brand ships product and marks as Shipped in the platform with optional tracking number	—
5	—	Creator confirms receipt in MutinyTalent
6	—	Creator creates and submits content as per campaign brief
7	Brand reviews and approves content in Tracking module	—
8	No payment released; campaign marked complete	Creator receives campaign completion badge on profile

25.3 Gifting Campaign Rules

- Gifting campaigns are clearly labelled as Non-Paid in the MutinyTalent marketplace
- Creators who accept and do not post receive a negative completion mark on their profile
- Invoice Generator is not available for gifting campaigns as there is no monetary transaction
- Brands can optionally offer a small bonus payment on top of the gift, converting the campaign to a hybrid Paid + Gifting type

26. Posting Windows & Proof of Posting

26.1 Posting Window

Brands set a posting window — a date range within which the creator must publish their approved content on their social platform. This gives creators flexibility on exact timing while ensuring the campaign runs within the brand's intended period.

- Posting window is set during campaign creation or confirmed in the AI Strategy Output
- The window start and end date are included in the auto-generated campaign contract
- Creators are reminded via push and WhatsApp notification 48 hours before the posting window closes
- If a creator does not submit proof of posting before the window closes, the submission is marked Overdue and the missed deadline escalation flow is triggered

26.2 Proof of Posting

After publishing their content, creators submit proof of posting manually through MutinyTalent. This confirms the content went live as agreed and triggers the final stage of the payment release flow.

Proof Type	How Submitted	Accepted For
Post URL	Creator pastes the direct link to the live post	All platforms
Screenshot	Creator uploads a screenshot of the published post showing handle, content, and timestamp	All platforms

- Brand is notified when proof of posting is submitted and can verify the post is live before triggering final payment
- If the submitted URL or screenshot does not match the agreed deliverable, brand can reject and request re-submission
- Once proof is accepted, campaign status updates to Posted and real-time analytics tracking begins

27. Creator Discovery — Search & Filters

27.1 Overview

The Creator Discovery module gives brands a powerful search interface to find the right creators before launching a Direct Campaign or building a shortlist. All filters work in combination and results update in real time as filters are applied.

27.2 Available Search Filters

Filter	Options	Notes
Platform	Instagram, TikTok, YouTube, Twitter/X, Pinterest	Multi-select; shows creators active on selected platforms
Follower Tier	Nano (1K-10K), Micro (10K-100K), Macro (100K-1M), Mega (1M+)	Multi-select
Engagement Rate	Slider: 0% to 20%+	Based on last 30 days average
Location / Country	Country and city-level filter	Based on creator registered location and audience geography
Content Niche / Category	Fashion, Beauty, Tech, Food, Travel, Fitness, Gaming, Finance, Lifestyle, Parenting, and 20+ more	Multi-select tag filter
Audience Gender	Primarily Male, Primarily Female, Mixed	Based on audience demographic data from connected platforms
Audience Age Range	13-17, 18-24, 25-34, 35-44, 45+	Percentage of audience in selected age bracket
Price Range	Estimated cost per post slider	Based on creator past rates and market data

27.3 Additional Discovery Features

- Keyword search: search creator bios, niche tags, and past campaign keywords
- Sort results by Relevance, Engagement Rate, Follower Count, Estimated Cost, or Reputation Score
- Save search filter combinations as presets for quick reuse
- AI-powered Similar Creators suggestion: from any creator profile, view creators with comparable audience and performance profiles

28. Creator Privacy Within Campaigns

28.1 Creator Visibility Policy

Creators participating in the same campaign cannot see each other. Each creator's participation is completely hidden from all other creators involved. This protects commercial sensitivities, prevents rate comparisons, and maintains a professional environment.

- Creator cannot see co-creators' names, handles, rates, or submission status
- Creator can only see their own campaign brief, deliverables, deadlines, and submission thread

- The total number of creators in a campaign is not disclosed to individual creators
- Brand retains full visibility of all creators and their individual progress across the campaign

31. Campaign Templates

31.1 Overview

Brands can create campaigns faster using reusable templates. The platform offers two types: brand-saved templates created from any previous campaign, and platform pre-built templates curated by the MutinyX team across popular industries.

31.2 Brand-Saved Templates

- Any completed or draft campaign can be saved as a template with one click
- Templates store: campaign type, brief structure, deliverable requirements, mandatory hashtags and disclosures, posting window duration, and budget range
- Templates are private to the brand account and accessible to all team members on Pro and Enterprise plans
- Templates can be renamed, edited, and deleted from the Campaign Templates library
- When starting a new campaign, brand selects a saved template and all fields are pre-populated — editable before launch

31.3 Platform Pre-Built Industry Templates

MutinyX provides a curated library of pre-built campaign templates across major industries, maintained and updated by the platform team based on current best practices and top-performing campaign structures.

Industry	Example Templates Available
Fashion & Apparel	New Collection Launch, Seasonal Sale Drive, Lookbook Campaign
Beauty & Skincare	Product Debut, Routine Integration, Before & After Challenge
Food & Beverage	Taste Test Unboxing, Recipe Integration, Restaurant Visit
Tech & Gadgets	Unboxing & First Look, Feature Deep-Dive, Comparison Review
Health & Fitness	30-Day Challenge, Supplement Integration, Workout Feature
Travel & Hospitality	Destination Showcase, Hotel Stay, Experience Review
Finance & Fintech	Product Explainer, Sign-Up Drive, Testimonial Campaign

- Pre-built templates include suggested creator tiers, recommended content formats, sample brief language, and estimated KPI benchmarks
 - Brands can use a pre-built template as-is or customise before launching
-

32. Creator Blocklist & Platform Ban System

32.1 Brand-Level Blocklist

Brands can permanently block any creator from seeing, finding, or applying to their campaigns. Blocked creators are hidden from the brand's entire presence on the platform.

- Block a creator from their profile, the applicants dashboard, or post-campaign from the campaign history
- Blocked creators cannot find the brand's Bulk Campaigns in the MutinyTalent marketplace
- Blocked creators cannot send Direct Campaign connection requests to the brand
- Block is silent — the creator is not notified they have been blocked
- Brands can view and manage their full blocklist from account settings
- Blocks can be reversed at any time by removing the creator from the blocklist

32.2 Platform-Wide Ban List (Admin Managed)

The MutinyX admin team maintains a platform-wide ban list for creators and brands who have violated platform policies. Banned accounts are removed from all platform activity.

- Banned creators are removed from all discovery results, campaign marketplaces, and active campaigns
 - Banned brands are prevented from launching new campaigns and their active campaigns are paused pending review
 - Bans can be temporary (with a defined reinstatement date) or permanent
 - Both brands and creators can report accounts for policy violations; reports are reviewed by the admin team within 48 hours
 - Banned users receive an in-app and email notification with the reason and any appeal process
-

33. Mandatory Hashtags, Tags & Disclosures

33.1 Overview

Brands can mandate specific hashtags, account tags, and legal disclosures (such as #ad or #sponsored) as required fields on any campaign. These are enforced at the content submission stage in MutinyTalent — creators cannot submit final content without confirming inclusion.

33.2 Required Fields in Campaign Brief

- Brands add mandatory hashtags, tagged accounts, and disclosure labels when creating a campaign brief
- Mandatory items are clearly marked as Required in the creator's brief view in MutinyTalent
- At the final content submission stage, creators must check a confirmation box acknowledging each mandatory item has been included in their post caption or content
- Brands can see the confirmation status in the Tracking module before approving
- If a creator submits without confirming mandatory items, the submission is automatically flagged for brand review with a Missing Requirements warning

33.3 Regulatory Compliance

- Platform defaults remind all creators of FTC and ASA disclosure requirements when submitting paid or gifted content
- Brands on Enterprise plan can set custom compliance templates for regulated industries (finance, healthcare, supplements)
- All mandatory field confirmations are logged with timestamp for compliance audit purposes

34. Creator Public Profile Pages

34.1 Overview

Every verified creator on MutinyTalent has a public-facing profile page with a unique shareable URL. This acts as a digital media kit — accessible to anyone with the link, including brands not yet on the platform.

34.2 Public Profile Contents

- Creator name, profile photo, bio, and location
- Connected social platform handles with live follower counts and engagement rates
- Content niche tags and primary content categories
- Availability status: Open to Work, Busy, or On Break
- Reputation Score and total campaigns completed on MutinyX

- Portfolio section: up to 12 content samples (images, video thumbnails, links)
- Past brand categories worked with (brand names kept confidential unless creator opts to display them)
- Verified badge if account has passed platform verification

34.3 Profile URL & Sharing

- Every creator gets a unique profile URL in the format: mutinytalent.com/creator/[handle]
- Creators can share their profile URL in bio links, email signatures, and pitch decks
- Brands not yet on MutinyX who visit the link are shown a branded landing page with the creator's profile and a prompt to sign up to connect
- Creators can toggle their public profile visibility on or off from MutinyTalent settings

35. Repeat Campaigns & One-Click Re-Hire

35.1 Overview

Brands can quickly re-engage creators they have successfully worked with before — without going through the full discovery and negotiation flow from scratch. This is accessible from both past campaign history and saved creator lists.

35.2 Re-Hire Flow

Step	Action
1	Brand navigates to a past completed campaign or their Saved Creator Lists
2	Brand clicks Re-Hire on a creator card
3	Platform pre-fills a new Direct Campaign with the creator's previous agreed rate, deliverables, and brief as a starting point
4	Brand reviews and edits any fields they want to change for the new campaign
5	Brand sends the pre-filled proposal to the creator via in-platform chat
6	Creator reviews, accepts or negotiates, and confirms
7	Platform auto-generates a new contract and the campaign activates once both parties sign

35.3 Re-Hire Indicators

- Creator profiles show a Worked Together badge when viewed by a brand they have previously collaborated with
 - Past performance data from previous collaborations (engagement rate, revision rounds, delivery time) is surfaced to the brand during the re-hire flow
 - Brands can see a full collaboration history with each creator: all past campaigns, ratings given, and content produced
-

36. Content Usage Rights Management

36.1 Overview

When a campaign contract is generated, the brand sets the duration and scope of their licensed rights to reuse the creator's content. The platform tracks all usage rights expiry dates and proactively alerts both parties before rights expire.

36.2 Usage Rights Settings in Contract

- Rights duration: 30 days, 60 days, 90 days, 6 months, 1 year, or perpetual
- Rights scope: organic social reposting only, paid advertising, website and digital use, print use, or all of the above
- Territory: global or specific countries/regions
- Exclusivity: non-exclusive (creator can work with other brands) or exclusive within a category for the rights duration

36.3 Expiry Tracking & Alerts

- All active usage rights are tracked in the brand's Content Rights Dashboard under the Analytics module
 - Brand receives in-app and email alerts 30 days, 14 days, and 3 days before rights expire
 - Creator also receives a notification when their content usage rights are nearing expiry
 - Brand can initiate a rights extension request directly from the expiry alert — triggers a new negotiation thread with the creator
 - Expired content is flagged in the brand's content library with an Expired badge to prevent accidental reuse
-

37. Creator Availability Status

37.1 Overview

Creators can set their availability status on MutinyTalent at any time to signal to brands whether they are actively accepting new campaigns. This status is displayed on their public profile, in discovery search results, and in the campaign applicants dashboard.

37.2 Availability Status Options

Status	Meaning	Platform Behaviour
Open to Work	Creator is actively looking for campaigns and available to take on new work	Profile highlighted in discovery; can apply to Bulk Campaigns; brands can send Direct connects
Busy	Creator is currently at capacity but may consider exceptional opportunities	Profile visible in discovery with Busy indicator; can still receive Direct connects; cannot apply to new Bulk Campaigns
On Break	Creator is temporarily unavailable and not accepting any new campaigns	Profile deprioritised in discovery results; Direct connect button disabled; cannot apply to campaigns

- Status can be changed at any time from the MutinyTalent app home screen
- If a creator has not updated their status in 60 days, the platform prompts them to confirm their current availability
- Availability status does not affect any existing active campaigns — only impacts new campaign discovery and applications

38. Creator Whitelisting for Paid Ads

38.1 Overview

Whitelisting allows a brand to run paid ads directly from a creator's social media account handle, making the ad appear to come from the creator rather than the brand. This typically drives higher trust and engagement than brand-run ads. Creators grant whitelisting permission to a specific brand from within MutinyTalent.

38.2 Whitelisting Flow

Step	Who Acts	Action
1	Brand	Requests whitelisting permission from creator during campaign setup (optional campaign setting)
2	Creator	Receives whitelisting request in MutinyTalent; reviews the scope (platforms, duration, ad types)
3	Creator	Approves or declines via in-app consent screen; approval is explicit and logged with timestamp
4	Platform	Records the whitelisting grant in the campaign contract as an additional clause
5	Creator	Completes the platform-specific steps to grant ad access (e.g. adds brand as a partner in Meta Business Manager)
6	Brand	Runs whitelisted ads from the creator's handle via their own connected ad account
7	Platform	Tracks whitelisted ad performance separately in the Analytics module

38.3 Whitelisting Rules

- Whitelisting is always optional and never a default requirement — creators must explicitly consent
- Whitelisting duration is set in the campaign contract and expires automatically
- Creators can revoke whitelisting access at any time from MutinyTalent settings; brand is notified immediately
- Whitelisted ad spend is tracked separately from organic boosting in the Analytics module
- Creators who grant whitelisting can optionally negotiate a higher rate for the additional ad rights

39. Brand Safety Scoring

39.1 Overview

Every creator profile on MutinyX carries an automated Brand Safety Score — a composite rating that helps brands quickly assess whether a creator's content history and behaviour aligns with their values before engaging. The score is calculated by the platform's content analysis system and updated regularly.

39.2 Brand Safety Score Components

Signal	What Is Analysed	Weight
Content Sentiment Analysis	AI scan of recent public posts for hate speech, violence, explicit content, or highly controversial topics	High

Signal	What Is Analysed	Weight
Platform Policy History	Any previous violations, strikes, or bans on connected social platforms	High
Past Campaign Conduct	Missed deadlines, disputes raised, content rejections, and cancellation history on MutinyX	Medium
Audience Quality	Percentage of real vs. bot followers, spam comment ratio, suspicious engagement patterns	Medium
Community Guidelines Adherence	Public comments and interactions flagged by social platform safety systems	Low

39.3 Score Display & Usage

- Brand Safety Score is displayed as a colour-coded rating on every creator profile: Green (Safe), Amber (Review Recommended), Red (High Risk)
- Score breakdown is expandable — brands can see which signals contributed to the rating
- Brands can filter creator discovery results by minimum Brand Safety Score
- Red-rated creators are automatically excluded from appearing in AI Strategy Mode creator recommendations
- Score is refreshed every 14 days based on latest content and platform data

39.4 Creator Score Disputes

- Creators can view their own Brand Safety Score from MutinyTalent settings
- If a creator believes their score is inaccurate, they can raise a dispute via the app
- Disputes are reviewed by the MutinyX admin team within 5 business days
- Score is temporarily marked Under Review during dispute assessment and restored or adjusted post-review

42. Budget Hard Stop — Bulk Campaign Selection

42.1 Behaviour

In a Bulk Campaign, the Budget Consumption Bar tracks how much of the total campaign budget has been committed to selected creators in real time. When the remaining budget reaches zero, the platform enforces a hard stop — no further creator selections are permitted until the brand increases the campaign budget.

42.2 Hard Stop Flow

- As the brand selects creators, the Budget Consumption Bar fills progressively and the Remaining Budget counter decrements with each selection
- When budget reaches zero, all unselected creator cards are visually locked with a Budget Exhausted indicator
- A prominent in-screen alert notifies the brand: budget is fully allocated, increase budget to select more creators
- The brand can either proceed to launch with the current selection, or click Increase Budget to top up the campaign wallet and unlock further selections
- Budget increases are processed immediately via the brand's saved payment method
- Once topped up, locked creator cards become selectable again and the Consumption Bar resets to reflect the new total

42.3 Partial Budget Scenarios

- If the last selectable creator's rate exceeds the remaining budget, the platform shows a Partial Budget warning instead of a hard stop, indicating exactly how much extra is needed to include that creator
- Brands can choose to skip that creator, select a cheaper alternative, or top up by the exact shortfall amount

43. Campaign Extension

43.1 Overview

Brands can extend the end date of an active campaign after it has launched. Pausing is not supported — campaigns run continuously from launch to their end date. Extension is the only post-launch timeline modification available.

43.2 Extension Rules

- Brand navigates to the active campaign and clicks Extend Campaign from the campaign management page
- Brand selects a new end date — must be at least 24 hours beyond the current end date
- Extension is applied immediately; all creators in the campaign are notified of the updated deadline via push and in-app notification
- Posting windows for individual creators are extended proportionally if they fall within the original campaign end date

- Extension does not affect any contracts already signed — it is treated as an amendment logged against the original campaign record
- There is no limit to the number of times a campaign can be extended
- Extensions cannot shorten a campaign — only move the end date forward

44. Creator Social Account Ban or Deletion Mid-Campaign

44.1 Creator Responsibility

If a creator's social account is banned, suspended, or deleted by the social platform mid-campaign, the creator is responsible for notifying the brand immediately via the in-platform campaign chat. The situation is then resolved through the platform's dispute resolution process.

44.2 Dispute Resolution Flow for Social Account Loss

Step	Action	Who
1	Creator notifies brand via in-platform chat that their account has been banned or deleted	Creator
2	Brand opens a formal dispute from the campaign management page citing Creator Account Unavailable	Brand
3	Both parties submit evidence: creator submits platform notification of ban; brand submits campaign contract	Both
4	Automated resolution engine checks campaign stage against contract terms to determine applicable payment	Platform
5	Admin reviews the automated ruling and confirms or overrides based on evidence	MutinyX Admin
6	Ruling is issued: payment released, refunded, or split per the cancellation policy for the relevant campaign stage	MutinyX Admin
7	Both parties are notified of the ruling via in-app, email, and push notification	Platform

44.3 Creator Obligations

- Creators are required to maintain their connected social accounts in good standing for the duration of any active campaign
- Repeated social account bans resulting in campaign disruptions will result in platform strikes against the creator's account

- Creator is not automatically entitled to payment if content was never posted due to account loss — ruling depends on campaign stage at time of ban

45. Dispute Resolution System

45.1 Overview

MutinyX uses a two-tier dispute resolution system: an automated engine that resolves the majority of disputes by matching the situation against the campaign contract terms, followed by admin review for edge cases the automation cannot conclusively resolve.

45.2 Tier 1 — Automated Resolution

When a dispute is opened, the platform's automated resolution engine immediately analyses the dispute against the signed campaign contract and platform policies to determine an outcome.

Dispute Type	Automated Resolution Logic
Brand refuses to approve content after 7 days with no feedback	Payment auto-released to creator in full
Creator misses deadline and brand cancels	Cancellation policy applied per campaign stage; partial payment released automatically
Brand cancels before any work submitted	Full budget refund to brand wallet; no payment to creator
Creator submits proof of posting; brand disputes it is the wrong content	Escalated to Tier 2 — cannot be auto-resolved
Brand requests more revisions than contract allows	Creator flagged as within rights; brand prompted to accept or raise formal dispute
Payment not released after content approval	System checks approval timestamp; auto-triggers payment release if approval confirmed

45.3 Tier 2 — Admin Review

Disputes the automated engine cannot conclusively resolve are escalated to the MutinyX admin team for manual review. Both parties are notified of escalation and given 48 hours to submit additional evidence.

- Admin reviews all submitted evidence: chat logs, content submissions, contract terms, approval history, and payment records
- Admin issues a binding ruling within 5 business days of escalation

- Rulings are final and cannot be appealed within the platform; users retain the right to pursue external legal remedies
- All Tier 2 rulings are logged for platform policy improvement and pattern analysis

46. Creator Referral Programme

46.1 Overview

MutinyTalent includes a referral programme that rewards existing creators for bringing new verified creators onto the platform. Rewards are paid in cash to the creator's platform wallet or as platform credits usable against future transaction fees.

46.2 Referral Flow

- Each verified creator receives a unique referral link and code from their MutinyTalent profile settings
- Creator shares their referral link via social media, DMs, or any channel outside the platform
- New creator signs up using the referral link, completes onboarding, and passes platform verification
- Referring creator receives their reward once the new creator completes their first paid campaign on the platform
- Reward is credited to the referring creator's platform wallet within 48 hours of the new creator's first campaign completion

46.3 Referral Reward Structure

Milestone	Cash Reward	Platform Credits
New creator verified (joined via referral link)	—	\$5 credits
New creator completes first paid campaign	\$10 cash to wallet	\$15 credits
New creator completes 5 paid campaigns	\$25 cash to wallet	\$35 credits

- There is no cap on the number of referrals a creator can make
- Referral rewards are tracked in a dedicated Referrals tab in the creator's MutinyTalent earnings section
- Fraudulent referrals (self-referral, fake accounts) result in reward reversal and a strike on the referring creator's account

47. Agency Accounts & Sub-Brand Workspaces

47.1 Overview

MutinyX supports agency accounts — a special account type that allows marketing agencies and management companies to operate and manage multiple brand clients from a single login, each within their own isolated sub-brand workspace.

47.2 Agency Account Structure

Level	Description
Agency Account	The master account owned by the agency; has visibility across all sub-brand workspaces
Sub-Brand Workspace	An isolated brand environment for each client; has its own campaigns, creator lists, analytics, billing, and settings
Agency Admin	Full access to all sub-brand workspaces; can create, archive, and manage workspaces
Sub-Brand Manager	Access limited to assigned sub-brand workspace(s) only; cannot see other client workspaces

47.3 Agency-Specific Features

- Create unlimited sub-brand workspaces under one agency account (Enterprise plan)
- Switch between sub-brand workspaces from a unified agency dashboard without logging out
- Cross-workspace reporting: agency admins can view aggregated performance metrics across all client brands
- Each sub-brand workspace has independent billing — agencies can either centralise billing or bill each workspace to separate client payment methods
- Sub-brand workspaces are fully isolated — creators, campaigns, and data from one client are never visible to another client's workspace
- Agency account is available on Enterprise plan only

48. Data Retention Policy

48.1 Brand Account Closure

When a brand account is deleted or closed, all associated data is retained indefinitely on MutinyX secure servers. Data is never purged, ensuring a permanent audit trail for legal, financial, and compliance purposes.

48.2 What Is Retained

- All campaign records: briefs, creator selections, content submissions, approval history, and campaign status logs
- All signed digital contracts between the brand and creators
- Complete payment and transaction history including invoices, receipts, and refund records
- All in-platform chat logs from negotiation and campaign communication threads
- Creator ratings and reviews given by the brand
- Analytics and performance data for all past campaigns

48.3 Access After Closure

- Closed brand accounts lose active platform access but can request a data export of their records within 90 days of closure by contacting MutinyX support
- Data export is provided as a structured CSV and PDF package covering all retained records
- Creator counterparties retain access to their own contracts and payment records even after a brand account closes
- Admin retains full read access to closed account data for dispute resolution and compliance purposes

49. Creator Earnings Wallet & Withdrawal Schedule

49.1 Earnings Wallet

All campaign payments released by the platform are deposited into the creator's MutinyTalent earnings wallet. The wallet acts as a holding account from which creators initiate scheduled withdrawals to their external bank account or payment method.

49.2 Withdrawal Schedule

Withdrawals are processed on a fixed schedule rather than on-demand, allowing the platform to batch transactions efficiently and reduce payment processing costs.

Schedule	Processing Day	Settlement Time
Weekly	Every Friday	2-3 business days to reach creator's bank
Bi-Weekly	1st and 15th of each month	2-3 business days to reach creator's bank

- Creators select their preferred withdrawal schedule (weekly or bi-weekly) from MutinyTalent wallet settings
- Withdrawals are only initiated if the wallet balance is above zero at the time of the scheduled processing run
- Creators can change their withdrawal schedule at any time; the change takes effect from the next scheduled cycle
- Withdrawal history with full transaction details is available in the Earnings section of MutinyTalent

49.3 Wallet Balance Visibility

- Creators can see real-time wallet balance broken down into: Pending (content approved, awaiting payment release), Available (released and ready for withdrawal), and Withdrawn (processed to external account)
- All pending earnings show the expected release date based on campaign approval status

50. Creator Counter-Proposals on Bulk Campaigns

50.1 Overview

When applying to a Bulk Campaign, creators can submit a counter-proposal that goes beyond just adjusting price. Creators can propose alternative deliverables, different content formats, or modified quantities — giving brands richer negotiation options and enabling more tailored campaign outcomes.

50.2 Counter-Proposal Fields

- Proposed price: creator's fee for the campaign as a whole
- Alternative deliverables: creator can suggest a different content format (e.g. proposing a YouTube video instead of a Reel), different quantity, or additional deliverable types
- Rationale: a short text field where the creator explains why their counter-proposal would deliver better results for the brand
- Portfolio samples: creator can attach up to 3 relevant content samples to support their proposal

50.3 Brand Handling of Counter-Proposals

- Counter-proposals are displayed in the Bulk Campaign applicants dashboard alongside standard applications, clearly labelled as Counter-Proposal
- Brand can accept the counter-proposal as-is, reject it, or open a negotiation thread to refine the terms further
- If accepted, the counter-proposal terms replace the original campaign brief for that specific creator and are written into the auto-generated contract
- Counter-proposals do not affect the campaign brief for other creators in the same campaign

51. Unified Activity Feed

51.1 Overview

The Unified Activity Feed is a real-time, chronological stream of all events across all of a brand's campaigns, accessible from the main dashboard. It gives campaign managers a single place to see everything that has happened and act on items that need attention without navigating across multiple campaigns.

51.2 Events Shown in the Feed

Event Type	Feed Entry Example
Content submitted	Sarah @sarahcreates submitted a draft video for Campaign: Summer Launch
Content approved	You approved final content from @techreviewjay for Campaign: Product Drop
Creator applied	3 new creators applied to Bulk Campaign: Holiday Collection
Payment released	Payment of \$450 released to @fashionwithkira
Contract signed	Contract signed by @foodiemike for Campaign: New Menu
Proof of posting received	@adventurelog submitted proof of posting for Campaign: Travel Series
Deadline approaching	Posting window closes in 48 hours for @lifestylebylena — Campaign: Q3 Push
Revision requested	You requested a revision from @beautybysophia — Campaign: Skincare Relaunch
Invoice received	@gamingwithomar sent an invoice for \$600
Campaign extended	You extended Campaign: Year-End Sale to December 31

51.3 Feed Interaction

- Each feed entry is actionable — clicking takes the brand directly to the relevant campaign, content submission, or creator profile
 - Feed can be filtered by campaign, event type, or date range
 - Unread feed items are highlighted; brands can mark all as read
 - Feed retains a rolling 90-day history; older events are archived and searchable
-

52. Dark Posts (To Be Decided)

52.1 Definition

A dark post is a paid advertisement that runs on a creator's social account handle but is never published to their public profile feed — visible only to the targeted ad audience. This is a common feature on platforms like Meta and TikTok that allows brands to leverage creator identity in ads without cluttering the creator's public content timeline.

52.2 Status

Dark post support has not been decided for v1.0. The decision will depend on the extent of whitelisting integration built in the initial release. The following considerations are noted for the product roadmap:

- Dark posts require the same creator whitelisting consent flow as standard boosted content (Section 38)
- If whitelisting is fully integrated via Meta and TikTok APIs, dark post capability is a low-lift addition requiring only a toggle at the ad setup stage
- Creators may want additional compensation for dark posts as the ad runs under their identity without appearing in their portfolio
- Platform should track dark post spend and performance separately from organic content and standard boosted posts in the Analytics module

52.3 Recommendation

Recommend deferring dark post support to v1.1 once whitelisting integration is stable. Include the dark post toggle as a planned feature in the paid ads setup flow so it can be activated without a major redesign.

55. Creator Per-Format Rate Card

55.1 Overview

Creators can set individual rates for each content format they offer directly on their MutinyTalent profile. This forms a transparent rate card visible to brands during creator discovery, removing ambiguity and accelerating the negotiation process for Direct Campaigns.

55.2 Rate Card Structure

Content Format	Rate Field	Notes
Short-form Video (Reel / TikTok)	Per video rate	Primary format; most commonly set
Long-form Video (YouTube)	Per video rate	Separate from short-form; typically higher
Static Image / Carousel Post	Per post rate	Can differ from video rates
Story (24hr Content)	Per story / per set of 3 stories	Often set lower than feed posts
Blog / Written Content	Per article rate	Word count range can be noted
Podcast / Audio	Per episode / per mention rate	Separate rate for full episode vs. ad read

- All rate fields are optional — creators can leave formats blank if they do not offer them
- Rates are displayed as estimated ranges on the public profile (e.g. From \$200) to maintain negotiation flexibility
- Creators can mark any format as Price on Request to invite direct discussion rather than showing a number
- Rate card is editable at any time; changes do not affect any existing active campaign agreements

55.3 Rate Card in Discovery

- Brands can filter creator search results by estimated cost per post using the Price Range filter, which references each creator's rate card data
- In the Bulk Campaign applicants dashboard, a creator's proposed price is shown alongside their rate card as a reference point

56. Creator Market Rate Benchmarks

56.1 Overview

MutinyTalent provides creators with anonymised market rate benchmarks so they can understand how their rates compare to other creators at the same follower tier, niche, and platform. This helps creators price competitively and avoid significantly under or overpricing their work.

56.2 Benchmark Data Shown to Creators

Benchmark	Description
Tier Average Rate	Average rate charged by creators at the same follower tier (Nano, Micro, Macro, Mega) for each content format
Niche Average Rate	Average rate within the creator's primary content niche (e.g. Fashion, Tech, Food)
Platform Average Rate	Average rate across Instagram, TikTok, YouTube for equivalent content formats
Your Rate vs. Market	Visual indicator showing if the creator is priced below, at, or above market average
Top Earner Range	Rate range of the top 20% of earners in the same tier and niche — aspirational benchmark

- Benchmarks are updated monthly based on all completed campaigns on the platform
- All benchmark data is fully anonymised — no individual creator's rates are ever exposed
- Benchmarks are visible only to creators in MutinyTalent settings; brands do not see benchmark data
- New creators with fewer than 3 completed campaigns see industry-wide benchmarks rather than platform-specific data until enough platform data exists for them

57. Creator Performance Tier System

57.1 Overview

MutinyTalent has a creator performance tier system that recognises and rewards creators who consistently deliver high-quality work on the platform. Each tier unlocks tangible perks including better discovery placement, lower platform fees, and exclusive campaign access.

57.2 Tier Structure

Tier	Badge	Requirements	Perks
Rising Star	Bronze badge	Verified account + completed first 3 paid campaigns with 4+ star average rating	Featured in Rising Star section of creator discovery; priority support response

Tier	Badge	Requirements	Perks
Verified Pro	Silver badge	10+ completed campaigns, 4.3+ star rating, under 2 avg revision rounds, 90%+ on-time delivery rate	Boosted ranking in discovery search results; 1% reduction in platform transaction fee; early access to new platform features
Elite	Gold badge	25+ completed campaigns, 4.7+ star rating, under 1.5 avg revision rounds, 95%+ on-time delivery rate	Top placement in discovery; 2% reduction in platform transaction fee; exclusive access to premium brand campaigns; dedicated account manager

57.3 Tier Rules

- Tiers are recalculated every 30 days based on rolling performance metrics
- A creator can be demoted if their metrics fall below the threshold for their current tier for two consecutive review cycles
- Tier badges are displayed on the creator's public profile, in discovery results, and in the Bulk Campaign applicants dashboard
- Creators are notified in-app when they qualify for a tier upgrade or are at risk of demotion

58. Audience Overlap Indicator

58.1 Overview

In the Bulk Campaign applicants dashboard, brands can see an estimated audience overlap percentage between any two selected creators. This helps brands build a creator mix that maximises unique reach and avoids paying to reach the same audience multiple times.

58.2 How Overlap Is Calculated

- Overlap is estimated using audience demographic data (age, gender, geography, interests) pulled from connected social platform APIs for each creator
- A similarity score is computed between any two creators' audience profiles and expressed as an estimated overlap percentage
- Overlap is shown as a pairwise indicator — each creator card in the applicants dashboard shows their estimated overlap with currently selected creators

58.3 Overlap Display in Applicants Dashboard

Overlap Level	Indicator Colour	Meaning
0–15%	Green	Low overlap — audiences are largely distinct; good for reach maximisation
16–35%	Amber	Moderate overlap — some shared audience; acceptable for most campaigns
36%+	Red	High overlap — significant shared audience; brand should consider alternative creator

- Overlap indicator updates dynamically as the brand adds or removes creators from their selection
- Brand can hover or tap on any overlap indicator to see a breakdown of which audience segments are shared
- Overlap data is estimated, not exact — displayed with a disclaimer noting it is based on available platform API data

59. Drip Campaigns (To Be Decided)

59.1 Definition

A drip campaign is a single campaign where a brand schedules multiple content posts from the same creator spread over a defined period — for example, four weekly posts over a month as one contracted engagement rather than four separate campaigns.

59.2 Status

Drip campaign support has not been decided for v1.0. The following considerations are noted for the product roadmap:

- Drip campaigns would require multi-milestone posting windows within a single campaign contract — an extension of the current single posting window model
- Payment structure would need to support per-post instalment releases rather than a single end-of-campaign payment
- The Tracking module would need to handle multiple sequential submission and approval cycles within one campaign record
- Brands that need series content in v1.0 can achieve this by creating separate campaigns for each post or by using the milestone-based split payment feature with multiple deliverables defined in one campaign

59.3 Recommendation

Recommend deferring drip campaign support to v1.2 after split payments and multi-deliverable tracking are stable. Document as a planned feature to avoid architectural decisions that would make it harder to add later.

60. Fraud Detection Engine

60.1 Overview

In addition to the Brand Safety Score, MutinyX operates a dedicated fraud detection engine that analyses every creator account for fake followers, bot-driven engagement inflation, and inauthentic audience behaviour. Each creator has a detailed Fraud Audit Report accessible to brands from their profile.

60.2 Fraud Signals Analysed

Signal	Detection Method	Risk Indicator
Fake Followers	Compares follower count growth spikes against posting activity; identifies mass follow/unfollow patterns	Estimated % of inauthentic followers
Bot Engagement	Analyses comment quality (generic, emoji-only, repetitive patterns), like velocity anomalies, and engagement timing clusters	Bot engagement rate estimate
Purchased Likes	Detects sudden engagement spikes on specific posts inconsistent with baseline; cross-references known bot network patterns	Flagged post count
Audience Credibility Score	Aggregate of real vs. inauthentic audience percentage across all connected platforms	0–100 credibility score
Engagement Rate Authenticity	Compares stated engagement rate vs. audience credibility-adjusted engagement rate	Adjusted engagement rate
Historical Flag Count	Number of times creator has been flagged by brands or admin for suspicious activity on MutinyX	Flag count and resolution history

60.3 Fraud Audit Report

- Available on every creator profile under a Fraud Audit tab visible to logged-in brands
- Report shows overall Audience Credibility Score, estimated fake follower percentage, adjusted engagement rate, and flagged post count
- Report refreshed every 14 days in sync with Brand Safety Score updates
- Creators with an Audience Credibility Score below 60 are automatically flagged for admin review and shown an Audit Pending badge until cleared

- Brands can report suspected fraud directly from the Fraud Audit tab; reports are investigated by admin within 48 hours

61. Private / Invite-Only Bulk Campaigns

61.1 Overview

Brands can create a Bulk Campaign as Private — making it invisible to the general MutinyTalent marketplace and accessible only to specific creators the brand hand-picks and invites. This is ideal for exclusive product launches, sensitive campaigns, or situations where the brand already has a shortlist in mind but wants the efficiency of the Bulk Campaign flow.

61.2 Private Campaign Flow

- During campaign creation, brand toggles Campaign Visibility to Private instead of Public
- Campaign is not published to the MutinyTalent marketplace and does not appear in any creator's browse feed
- Brand selects creators to invite from their Saved Creator Lists or directly from discovery search
- Selected creators receive a private campaign invitation via push notification, in-app, and email with a direct link to the campaign brief
- Invited creators can accept (and submit their application with proposed price) or decline the invitation
- Brand reviews applications from invited creators only in the applicants dashboard and proceeds with the standard Bulk Campaign selection flow
- Private campaigns can be converted to public at any time before the application deadline if the brand wants to open it to more creators

61.3 Private Campaign Indicators

- Private campaigns are marked with a Private badge in the brand's campaign dashboard
- Invited creators see a You've Been Invited label on the campaign card in MutinyTalent
- Only creators who received an invitation can see the campaign brief and apply

62. Campaign Brief Mood Board

62.1 Overview

When creating or editing a campaign brief, brands can attach a mood board — a curated collection of visual references including images, video links, and external URLs — to give creators a clear visual direction for the content they need to produce. This reduces misaligned creative output and revision rounds.

62.2 Mood Board Assets

- Image uploads: up to 20 images (JPG, PNG, WEBP); max 10 MB per image
- Video links: paste YouTube, TikTok, Instagram, or Vimeo URLs as reference examples
- External links: any URL (Pinterest boards, brand website pages, competitor examples, editorial references)
- Caption per asset: optional short text label on each mood board item explaining what the brand likes about it

62.3 Creator Experience

- Creators see the mood board in their campaign brief view in MutinyTalent before accepting or applying
- Mood board is accessible throughout the campaign — creators can refer back to it during content creation
- Mood board assets are included in the campaign contract as reference materials, not binding creative requirements

63. Milestone-Based Split Payments

63.1 Overview

Brands can configure milestone-based split payments for any campaign — releasing portions of the creator's total fee at different stages of the campaign workflow rather than in a single payment at the end. This protects creators by ensuring partial payment for work completed at each stage.

63.2 Configurable Milestones

Milestone	Default Split %	Customisable?
Script / Concept Approved	25%	Yes — brand can set 0–50%
Draft Content Approved	25%	Yes — brand can set 0–50%

Milestone	Default Split %	Customisable?
Final Content Approved	50%	Auto-calculated as remainder

- Brands enable split payments during campaign creation; the default is a single payment at final approval
- Brands can customise the percentage at each milestone as long as all milestones sum to 100%
- Each milestone payment is automatically released when the brand approves that stage in the Tracking module
- The auto-release rule (7 days no response) applies to each milestone independently — if brand does not act on a milestone within 7 days, that milestone's payment is auto-released
- Split payment breakdown is written into the auto-generated campaign contract so both parties see the schedule before signing
- Creators can see pending milestone payments in their earnings wallet with expected release dates

64. Brand Ambassador Badges (To Be Decided)

64.1 Definition

A brand ambassador badge would allow creators to display a verified long-term partnership with a specific brand on their MutinyTalent public profile — signalling an ongoing relationship beyond a one-off campaign. The badge would be visible to brands during discovery and on the creator's public profile page.

64.2 Status

Brand ambassador badge support has not been decided for v1.0. The following considerations are noted for the product roadmap:

- Ambassador badges would require mutual opt-in: brand approves the badge display; creator controls whether to show it
- Badge display could create discovery bias — brands may unfairly deprioritise creators who are ambassadors of competitors
- A creator showing a competitor's ambassador badge may reduce their appeal in discovery for brands in the same category
- The platform would need to define what qualifies as an ambassador relationship — number of campaigns completed, active contract, or manual brand designation

64.3 Recommendation

Recommend deferring to v1.2 after analysing how creator profiles are used in discovery. Consider a softer version first: a Repeat Collaborator indicator showing the number of completed campaigns with a brand, without naming the brand, as a trust signal without competitive sensitivity.

67. Long-Term Ambassador Programme

67.1 Overview

Brands can establish a long-term ambassador programme with a creator — a recurring content commitment under one master agreement covering multiple months or quarters. The programme is entirely opt-in for creators; no creator can be enrolled without their explicit consent.

67.2 Ambassador Programme Setup

- Brand initiates an ambassador proposal from a creator's profile or from their Saved Creator Lists
- Proposal includes: programme duration (3, 6, or 12 months), monthly or quarterly deliverable commitment, total compensation, payment schedule, and content requirements
- Creator receives the proposal in MutinyTalent and must explicitly accept before the programme activates — no automatic enrolment
- Once both parties accept, the platform generates a Master Ambassador Agreement covering the full programme duration
- Individual campaign deliverables within the programme are managed as recurring sub-campaigns under the master agreement

67.3 Programme Management

Feature	Description
Programme Dashboard	Dedicated view showing programme status, deliverables completed vs. remaining, total spend to date, and upcoming milestones
Auto-Recurring Deliverables	Each monthly or quarterly deliverable cycle is automatically created as a new submission task without the brand having to manually create it
Programme Renewal	30 days before programme expiry, both parties receive a renewal prompt; brand can extend, renegotiate terms, or let it expire
Early Termination	Either party can exit with 30 days written notice via the platform; partial payment applies per cancellation policy
Performance Review	Quarterly performance summary showing engagement trends, audience growth attributable to the programme, and rate of spend

67.4 Creator Protections

- Creators can decline a renewal without any negative impact on their platform Reputation Score
 - Brands cannot change deliverable requirements mid-programme without creator consent — any changes require a signed amendment
 - Programme payments follow the same platform-processed payment model as standard campaigns
-

68. AI Creator Recommendation Engine

68.1 Overview

MutinyX proactively surfaces AI-powered creator recommendations across two touchpoints: the brand dashboard and the campaign creation flow. Recommendations are personalised to each brand based on their campaign history, goals, industry, and budget — saving significant discovery time.

68.2 Dashboard Recommendations

The brand dashboard displays a Recommended Creators panel showing up to 10 curated creator suggestions at any time.

- Recommendations refresh weekly based on updated creator performance data and brand activity
- Each recommendation shows: creator handle, platform, follower count, engagement rate, estimated cost, Reputation Score, Brand Safety Score, and a one-line AI rationale (e.g. Strong fit based on your past Beauty campaigns and target 18-24 female audience)
- Brands can save, dismiss, or connect directly from the recommendation panel
- Dismissed creators are not shown again for 30 days; brand can reset dismissed recommendations from settings

68.3 In-Campaign Recommendations

During campaign creation in both Step-by-Step and AI Strategy Mode, the platform suggests creators that best match the campaign's brief, budget, target audience, and content format.

- Recommendations rank creators by predicted campaign fit score — a composite of audience match, content format experience, past performance in similar campaigns, and price fit within budget
- Brand can add recommended creators directly to the campaign from the suggestion panel without navigating to the full discovery module
- Recommendations adapt in real time as the brand adjusts campaign parameters — changing the target audience or budget immediately refreshes suggestions

68.4 Recommendation Data Sources

- Brand's past campaign results and creator performance history on MutinyX
- Creator performance history across all brands (anonymised)
- Current creator availability status — only Open to Work creators are recommended
- Brand Safety Score and Fraud Audit data — Red-rated creators are never recommended
- Creator tier badges — Elite and Verified Pro creators are weighted higher in recommendations

69. Private Talent Roster

69.1 Overview

The Private Talent Roster is a distinct feature from Saved Creator Lists — it is a curated, exclusive internal pool of pre-approved creators that a brand has formally vetted and onboarded as preferred partners. Unlike saved lists (which are informal bookmarks), the talent roster represents a brand's active creator network with structured management tools.

69.2 Roster vs. Saved Lists

Feature	Saved Lists	Private Talent Roster
Purpose	Bookmark creators for future consideration	Manage an active pool of vetted preferred creators
Creator Awareness	Creators are not notified	Creators are notified and can accept/decline roster inclusion
Onboarding Flow	None — brand saves creator unilaterally	Brand sends roster invitation; creator accepts
Exclusivity	None	Optional: brand can mark a creator as Exclusive to their roster (creator must agree)
Metrics Dashboard	Live metrics per creator	Full performance history + roster-specific analytics
Campaign Launch	One-click re-hire	Priority campaign assignment and pre-agreed rate cards
Plan Availability	All plans	Pro and Enterprise only

69.3 Roster Management Features

- Add creators to roster by sending a formal invitation from their profile or from campaign history
- Creator receives invitation in MutinyTalent and can accept, decline, or negotiate roster terms (such as pre-agreed base rate)
- Roster dashboard shows all roster creators with their current availability, active campaign count, and last collaboration date
- Brand can assign roster tiers internally (e.g. Tier A, Tier B) to prioritise creator selection for different campaign types
- Roster creators receive priority notification for new Private Invite-Only campaigns before public campaigns are launched

70. AI Smart Budget Allocator

70.1 Overview

During campaign setup, MutinyX's AI Smart Budget Allocator analyses the brand's campaign goals, target audience, and total budget and recommends the optimal split of spend across creator tiers to maximise reach and engagement. This is available in both AI Strategy Mode and Step-by-Step campaign creation.

70.2 Allocator Output

The Smart Budget Allocator presents a recommended budget breakdown showing:

- Suggested number of creators per tier (Nano, Micro, Macro, Mega)
- Recommended spend per tier and per creator
- Estimated total reach and projected engagement rate for the recommended mix
- Rationale for the recommendation based on the brand's campaign objective (awareness vs. conversion vs. engagement)
- Alternative allocation scenarios with trade-off comparisons (e.g. fewer Macro creators vs. more Micro creators for same budget)

70.3 Allocation Logic

Campaign Objective	Recommended Allocation Bias
Brand Awareness (max reach)	Higher allocation to 1-2 Macro or Mega creators for broad reach

Campaign Objective	Recommended Allocation Bias
Engagement & Community	Higher allocation to Micro creators for deeper audience connection and higher engagement rates
Conversion & Sales	Mixed Nano + Micro focus with high audience trust and niche relevance
Product Launch (mixed goals)	Tiered approach: 1 Macro for awareness + multiple Micro/Nano for engagement depth

- Brand can accept the AI recommendation as-is or manually override any tier allocation
- When a brand changes the total budget, the allocator automatically recalculates and updates the recommendation in real time

71. Pre-Launch Content Performance Prediction

71.1 Overview

Before a campaign goes live, MutinyX displays an AI-generated performance prediction showing estimated reach and engagement metrics for the planned creator selection. This helps brands set realistic KPI expectations and make final creator selection adjustments before committing budget.

71.2 Predicted Metrics Shown

Metric	How Estimated
Estimated Total Reach	Sum of each selected creator's average reach per post (last 30 days), adjusted by content format factor
Estimated Total Impressions	Reach estimate multiplied by average impression-to-reach ratio for each platform
Projected Engagement Rate	Weighted average of each creator's engagement rate adjusted for content format and posting window timing
Projected Total Engagements	Estimated reach multiplied by projected engagement rate
Estimated Cost Per Engagement (CPE)	Total campaign budget divided by projected total engagements
Confidence Level	High / Medium / Low — based on how much historical data exists for the selected creators on the platform

71.3 Prediction Behaviour

- Predictions update dynamically as the brand adds or removes creators from their selection
 - Predictions are shown with a disclaimer noting they are estimates based on historical data and actual results may vary
 - Post-campaign, predicted metrics are shown alongside actual results in the Analytics module for accuracy benchmarking
 - Creators with fewer than 5 completed campaigns on the platform use social API data for prediction with a lower confidence rating
-

72. Post-Campaign Wrap Report

72.1 Overview

Within 48 hours of a campaign ending, MutinyX automatically generates a branded post-campaign wrap report as a downloadable PDF. The report is designed to be shared directly with internal stakeholders, clients, and leadership without requiring any manual formatting or data compilation.

72.2 Wrap Report Contents

- Campaign summary: name, dates, campaign type, total creators, total budget spent
- Performance overview: total reach, impressions, engagements, engagement rate, and CPE vs. pre-launch predictions
- Creator performance breakdown: per-creator results table ranked by engagement rate
- Top 3 performing content pieces with thumbnail previews and key metrics
- Budget utilisation summary: planned vs. actual spend per creator
- Posting compliance summary: all creators who posted on time vs. late vs. did not post
- Content rights status: summary of active usage rights with expiry dates
- AI-generated campaign insights: 3-5 bullet point observations and recommendations for the next campaign

72.3 Report Customisation

- Brand logo and brand colours applied automatically from the brand's onboarding profile
 - Brand can add a custom executive summary note before downloading
 - Report available in English only (v1.0)
 - Wrap report stored in the brand's campaign history and re-downloadable at any time
-

73. Campaign Duplication

73.1 Overview

Brands can duplicate any past or active campaign with a single click, creating an exact copy with all settings, brief, deliverables, mandatory disclosures, mood board, and budget structure pre-populated. This is distinct from templates — duplication copies a specific campaign instance including its creator selection history as a reference.

73.2 What Gets Duplicated

- Campaign name (copied with Duplicate of prefix — editable)
- Campaign type (Direct or Bulk)
- Full campaign brief text and deliverable requirements
- Mandatory hashtags, tags, and disclosures
- Mood board assets and links
- Budget amount and split payment milestone configuration
- Posting window duration (dates reset to future; duration preserved)
- Campaign template settings and visibility (Public or Private)

73.3 What Does Not Get Duplicated

- Creator selections and contracts — brand starts fresh creator selection for the new campaign
- Submitted content and approvals — new campaign starts with empty tracking
- Analytics data — new campaign has its own analytics from zero
- Campaign status — duplicated campaign always starts as Draft

74. Brand Content Library

74.1 Overview

The Brand Content Library is a permanent, searchable repository of all approved influencer content ever produced for a brand across all campaigns on MutinyX. It gives brands instant access to their full library of influencer-created assets for repurposing, reporting, and rights management.

74.2 Library Features

- All content pieces automatically added to the library upon brand approval in the Tracking module
- Search by creator name, campaign name, content format, platform, date range, or custom tags
- Custom tagging: brands can add their own tags to any content piece for internal organisation (e.g. Summer 2026, Hero Content, High Performer)
- Filter by usage rights status: Active Rights, Expiring Soon, Expired — with direct link to rights extension flow for expiring content
- Download any content piece directly from the library in original quality
- Bulk download: select multiple pieces and download as a ZIP file
- Share a content piece directly to the brand's social channels or ad account from the library (Pro and Enterprise)

74.3 Library Organisation

- Content is organised by campaign by default; viewable as a flat all-campaigns library with filters
- Grid and list view options for browsing
- Content pieces show key metadata: creator, campaign, format, platform, date posted, engagement metrics, and current rights status

75. Promo Code & Affiliate Link Tracking

75.1 Overview

Brands can assign unique promo codes and affiliate tracking links to each creator in a campaign, enabling direct attribution of sales, sign-ups, or conversions to specific creators. This bridges influencer marketing with performance marketing and gives brands measurable revenue impact data.

75.2 Promo Code Setup

- During campaign creation, brand enables promo code tracking and either inputs custom codes per creator or lets the platform auto-generate unique codes
- Auto-generated code format: [BrandName]-[CreatorHandle] (e.g. MUTINY-SARAH20) — editable before campaign launch
- Codes and their assigned creators are displayed in the campaign management page for brand reference
- Creators receive their unique code in the campaign brief within MutinyTalent and are instructed to include it in their post caption, bio link, or video description

75.3 Affiliate Link Setup

- Brand inputs their destination URL and the platform generates a unique tracked link per creator using UTM parameters
- Affiliate links are included in the creator's brief and can be used in bio links, Stories swipe-ups, or video descriptions
- Click-through data from affiliate links is tracked and reported in the campaign Analytics module

75.4 Conversion Tracking

Metric Tracked	Source
Promo code redemptions	Brand inputs redemption data manually or via CSV upload (platform does not connect to brand's checkout system in v1.0)
Affiliate link clicks	Tracked automatically via platform UTM links
Revenue attributed per creator	Calculated from promo code redemptions x average order value (brand inputs AOV)
Cost per acquisition (CPA)	Creator fee divided by number of attributed conversions

- All promo code and affiliate performance data is shown in a dedicated Conversion Tracking tab within campaign Analytics
- Conversion data is included in the Campaign Summary Report export and post-campaign wrap report

76. Non-Functional Requirements

76.1 Performance

- Dashboard and all core pages load in under 2 seconds on standard broadband
- Real-time analytics refresh every 60 seconds for active campaigns
- Budget Consumption Bar and Estimated Reach Counter update within 300ms of creator selection change
- Platform must support concurrent use by at least 10,000 brand accounts and 500,000 creator accounts

22.2 Responsiveness & Accessibility

- MutinyX web platform must be fully responsive across desktop, tablet, and mobile viewports
- MutinyTalent app must support iOS 15+ and Android 10+
- All core workflows must be completable on a 375px-wide mobile screen

- WCAG 2.1 AA accessibility compliance for web platform

22.3 Security & Privacy

- All data encrypted in transit (TLS 1.3) and at rest (AES-256)
 - OAuth 2.0 for social platform integrations (Instagram, TikTok, YouTube)
 - Role-based access control: Admin, Campaign Manager, Viewer roles for brand accounts
 - GDPR and CCPA compliant data handling; creator data never sold to third parties
-

77. Integration Requirements

Integration	Purpose	Priority
Instagram Graph API	Fetch creator metrics, audience data, and post performance	P0
TikTok for Developers API	Creator metrics, video performance data	P0
YouTube Data API	Channel stats, video analytics	P0
Meta Ads API	Content boosting and paid amplification	P1
TikTok Ads API	TikTok content boosting	P1
Stripe / Payment Gateway	Creator payments and brand billing	P0
AI/LLM Provider	AI Strategy Mode conversational campaign creation	P0
